23 March 2020

Dear Customers, Prospective Customers, Business Partners, and Vendors –

APC Technologies has been adjusting to the evolving challenges of COVID-19, and we want you to know that APC is continuing to support your operations and business efforts during this challenging time. APC's manufacturing facility and its replacement filter operations – as well as its capability to supply other spare parts – continue to operate as APC serves numerous customers involved directly with 'life-sustaining' work in the food, wastewater treatment, electric power, medical equipment and services, chemical, plastic, resin, rubber, steel, transportation and other industries.

In concert with the above, *nothing* is more important than the health and safety of APC personnel and of our business associates. Profits and production are secondary to health & safety. Zero exceptions.

Our team has been implementing practices including working remotely; avoiding all person to person contact and – when an in-person visit is absolutely necessary – wearing protective masks and following all social distancing guidelines; increasing cleaning and disinfection measures at our facilities; and using video conferencing and audio conference calls to personally yet safely engage with our customers and business partners; and implementing all CDC, other federal, state and county protocols.

As developments continue to unfold, our commitment to you as a trusted partner will remain the same; we will continue working as hard as always to serve your needs while also maintaining a top priority on health and safety.

Please contact us with any specific questions you may have about our operations during the COVID-19 crisis.

Sincerely,

Hans P. Tandon  
President
